

Technology

ON THE CUTTING EDGE

Brooks Pierce is surrounded by companies making huge strides in technology, research and development. Our Raleigh office is just miles away from Research Triangle Park, a hub for software, pharmaceutical, and engineering innovation.

Brooks Pierce attorneys are well-equipped to handle the legal needs of technology companies. We represent companies making impressive advances in computers, energy, healthcare, and many other fields.

Our services include:

Intellectual property counsel and litigation – our attorneys assist technology companies in applying for and registering patents and trademarks. We also defend clients against claims of intellectual property theft.

Privacy counsel – our attorneys remain on the leading edge of ever-changing privacy regulation. We lend that knowledge to our clients, helping them develop privacy policies and protect themselves from data breaches.

Government relations – our lobbying clients include the NC Technology Association, an electric car manufacturer, a leading computer software developer, and other innovators. We represent them before legislative bodies and keep them apprised of impactful legislation.
